AssurePay Attribute Match Codes 134

Appendix H: AssureLocate Match Codes 135
AssureLocate VPN Probability Result Codes 135

Introduction

The BlueAssure Platform integration API is an XML web service over HTTPS. All requests and responses are encrypted using 256 bit TLS 1.2. BlueAssure supports any platform capable of sending and receiving XML.

Web Service Overview

Each product has a separate URL that is used to make requests to the BlueAssure Platform. All requests are XML and must use the POST method for the request to be accepted. For auditing and troubleshooting purposes, please include a unique customer reference number for each transaction that relates to an account, identity, or transaction within your own system.

Integration Credentials

To set up web service credentials to make API calls go to the account security page on the platform site (https://blueassure.evssolutions.com/Account/Security) and then click the Add button under the Integration Credentials section. The username and password is automatically generated. Enter a description and click save. Don't forget to copy the password before clicking save because it will not be available again after saving. If you do lose the password you can click the edit button in the list of integration credentials to have the option to regenerate a new password. Please note that the old password will no longer work.

IP Restrictions

All users of the BlueAssure Management Platform are restricted by IP Address for security purposes. A user with an invalid IP range can still login but are restricted in what they can both see and do. EVS will add any initial IP ranges so that you can fully manage your account including adding any additional IP ranges yourself. To add additional IP ranges go to the account security page on the platform site (https://blueassure.evssolutions.com/Account/Security) and then click on the Edit button under the IP Restrictions section.

Customer Reference Field

The `<CustomerReference>` element is a field that will accept any text data including letters, numbers, and special characters. This data will be stored with the transaction being processed and can be used to associate a transaction in BlueAssure with a record or identity in your system. This field can also be used to find the transaction at a later date using the BlueAssure Management Platform.

Web Service Warnings

When submitting requests to the web service the BlueAssure Management Platform will attempt to clean input data that fails validation. For instance, with the consumer product the SSN field can have no digits, four digits, or nine digits. If the request includes an SSN that includes hyphens (123-456-789) then it is technically invalid for the field since only numbers are allowed. However, we remove non-numeric characters for that field which then leaves a valid nine-digit SSN. We continue the transaction with the cleaned SSN field and return a warning in the `<Warnings>` section of the XML return. This process occurs for all fields we are able to clean including zip codes, phone numbers, addresses, etc.

Web Service Errors

The `<Errors>` section of the XML return is similar to the `<Warnings>` section except that errors are problems we were unable to recover from. For instance, the first name field is required for the consumer product. If a first name is not provided we cannot continue with the transactions. In this case we return an error message with the reason the transaction was stopped for failed. Whereas the `<Warnings>` section deals primarily with input validation, the `<Errors>` section is used for unrecoverable input validation, an invalid XML request, an account or using being locked or disabled, invalid credentials, etc. Below is a list of errors and their codes.

Error Code	Error Message
1000	An unknown internal error occurred
1001	Creation of transaction failed
1002	Data provider returned an error
1003	XML parse error
2000	Account is locked
2001	Account is disabled
2002	Account not found
2003	User is locked
2004	User is disabled
2005	User not found
2006	Not enough permissions to perform the action
2007	Account does not have access to the product being requested
2008	User is not allowed to run web service requests
2009	Account has reached its transaction limit
2010	IP address is not in acceptable range
3000	An input field failed validation
4000	An active FinCEN list could not be found

Solution Decision Workflow

BlueAssure Management Platform allows you to define a custom decision workflow that is used each time a request is made to determine if the identity passes or fails based on your needs and business rules. If a workflow match cannot be made that either passes or fails a transaction it will be marked

with an outcome of needing further review. The web service returns a <WorkflowOutcome> result code containing one of the outcomes listed in the table below.

Workflow Code	Workflow Message
P	Pass
F	Fail
R	Needs Further Review

Test Data

Since EVS has no data in-house, we cannot offer any real test data; however, for AssureID, we offer a series of fake SSN's which will return a dummy XML response to be used for testing purposes. Use any name and address of your choosing in conjunction with any of the below SSNs to receive the canned/dummy response. If Solution Engine Workflow has been enabled of your account, the dummy response will also include a workflow outcome. There are no transaction charges associated with using the below test data.

SSN	Workflow Code	Workflow Message
222222222	P	Pass
333333333	F	Fail
444444444	R	Needs Further Review

Example .NET Code

```
using System.IO;
using System.Net;
using System.Xml.Linq;

XDocument request =
  new XDocument(
    new XDeclaration("1.0", "utf-8", "yes"),
    new XElement("PlatformRequest",
      new XElement("Credentials",
        new XElement("Username", "Your Username"),
        new XElement("Password", "Your Password")
      ),
      new XElement("CustomerReference", "Your Unique Reference Number"),
      new XElement("Identity",
        new XElement("FirstName", "John"),
        new XElement("LastName", "Test"),
        new XElement("Street", "123 Main St"),
        new XElement("City", "Louisville"),
        new XElement("State", "KY"),
        new XElement("ZipCode", "40223"),
        new XElement("DateOfBirth", "1950-01-31")
      )
    )
  );

string url = "https://blueassure.evssolutions.com/WebServices/Integrated/Main/V330/AssureId";
byte[] postData = Encoding.UTF8.GetBytes(request.ToString());

HttpWebRequest webRequest = (HttpWebRequest)WebRequest.Create(url);
webRequest.ProtocolVersion = HttpVersion.Version11;
webRequest.Method = "POST";
webRequest.ContentType = "text/xml charset=utf8";
webRequest.ContentLength = postData.Length;

Stream requestStream = webRequest.GetRequestStream();
requestStream.Write(postData, 0, postData.Length);
requestStream.Close();

HttpWebResponse webResponse = (HttpWebResponse)webRequest.GetResponse();
StreamReader reader = new StreamReader(webResponse.GetResponseStream());
```

Example PHP Code

```php
// URL of the AssureID Product Service
$serviceUrl = 'https://blueassure.evssolutions.com/WebServices/Integrated/Main/V300/AssureID';

// Username generated from platform site for use only with the web service
$username = '';

// Password generated from platform site for use only with the web service
$password = '';

// Identity information to search for
$identity = array(
    'FirstName' => 'John',
    'LastName' => 'Test',
    'Street' => '123 Main St',
    'City' => 'Louisville',
    'State' => 'KY',
    'ZipCode' => '40223',
    'DateOfBirth' => '1950-01-31'
);

// Build the XML Request
$requestXml = '<?xml version="1.0" encoding="UTF-8"?>'.
    '<PlatformRequest>'.
        '<Credentials>'.
            '<Username>'.$username.'</Username>'.
            '<Password>'.$password.'</Password>'.
        '</Credentials>'.
        '<CustomerReference></CustomerReference>'.
        '<Identity>'.
            '<FirstName>'.$identity['FirstName'].'</FirstName>'.
            '<LastName>'.$identity['LastName'].'</LastName>'.
            '<Street>'.$identity['Street'].'</Street>'.
            '<City>'.$identity['City'].'</City>'.
            '<State>'.$identity['State'].'</State>'.
            '<ZipCode>'.$identity['ZipCode'].'</ZipCode>'.
            '<DateOfBirth>'.$identity['DateOfBirth'].'</DateOfBirth>'.
        '</Identity>'.
    '</PlatformRequest>';

// Make the request
$ch = curl_init($serviceUrl);
curl_setopt($ch, CURLOPT_POST, 1);
curl_setopt($ch, CURLOPT_HTTPHEADER, array('Content-Type: text/xml'));
curl_setopt($ch, CURLOPT_POSTFIELDS, $requestXml);
curl_setopt($ch, CURLOPT_RETURNTRANSFER, 1);
$response = curl_exec($ch);
curl_close($ch);

// Debug output of the response
header("Content-Type:text/xml");
echo $response;
```

BlueAssure Products

AssureKYC

The AssureID product is used to authenticate a consumer based on whole or partial social security number, name, address, phone number, driver's license, and date of birth in the United States.

Service URL

`https://blueassure.evssolutions.com/WebServices/Integrated/Main/V300/AssureKyc`

Input Fields

Field	Required	Notes
FirstName	**Yes**	
MiddleName	No	
LastName	**Yes**	
Generation	No	
Ssn	No	4 or 9-digit social security number
Street	**Yes**	
City	No	
State	No	2 letter state abbreviation
ZipCode	**Yes**	5 or 9-digit zip code
DateOfBirth	No	Format: yyyy-MM-dd
PhoneNumber	No	10-digit phone number
SendPhoneVerification	No	**AssurePhone Option Only.** Send a value of True to have a verification code sent as a text message / voice call to the phone number provided in the PhoneNumber field.
ForceVerificationByCall	No	**AssurePhone Option Only.** Send a value of True to force Phone Verification to be sent by voice call, even if the provided phone number is found to be a mobile phone.
EmailAddress	No	
IpAddress	No	IPv4 address. Format: ###.###.###.###
SimilarityThreshold	No	**AssureWatch Option Only.** See AssureWatch for more details.

AssureKYC Request XML Example

```
<?xml version="1.0" encoding="utf-8"?>
<PlatformRequest>
  <Credentials>
    <Username>Your Web Service Username</Username>
    <Password>Your Web Service Password</Password>
  </Credentials>
  <CustomerReference>ABC123456789</CustomerReference>
  <Identity>
    <FirstName>John</FirstName>
    <MiddleName></MiddleName>
    <LastName>Test</LastName>
    <Generation></Generation>
    <Ssn>222222222</Ssn>
    <Street>123 Main St</Street>
    <City>Louisville</City>
    <State>KY</State>
    <ZipCode>40223</ZipCode>
    <DateOfBirth>1950-01-31</DateOfBirth>
    <PhoneNumber>5554443333</PhoneNumber>
    <EmailAddress>john.test@example.com</EmailAddress>
    <IpAddress>93.184.216.34</IpAddress>
  </Identity>
</PlatformRequest>
```

AssureID

The AssureID product is used to authenticate a consumer based on whole or partial social security number, name, address, phone number, driver's license, and date of birth in the United States. Fraud shield codes and additional addresses are also returned.

Service URL

`https://blueassure.evssolutions.com/WebServices/Integrated/Main/V300/AssureId`

Input Fields

Field	Required	Notes
FirstName	**Yes**	
MiddleName	No	
LastName	**Yes**	
Generation	No	
Ssn	No	4 or 9-digit social security number
Street	**Yes**	
City	No	
State	No	2 letter state abbreviation
ZipCode	**Yes**	5 or 9-digit zip code
DateOfBirth	No	Format: yyyy-MM-dd
DriverLicenseNumber	No, except when DriverLicenseState is present.	
DriverLicenseState	No, except when DriverLicenseNumber is present.	2 letter state abbreviation
PhoneNumber	No	10-digit phone number
SendPhoneVerification	No	**AssurePhone Option Only.** Send a value of True to have a verification code sent as a text message / voice call to the phone number provided in the PhoneNumber field.
ForceVerificationByCall	No	**AssurePhone Option Only.** Send a value of True to force Phone Verification to be sent by voice call, even if the provided phone number is found to be a mobile phone.
EmailAddress	No	
IpAddress	No	IPv4 address. Format: *###.###.###.###*
SimilarityThreshold	No	**AssureWatch Option Only.** See AssureWatch for more details.

AssureID Request XML Example

```
<?xml version="1.0" encoding="utf-8"?>
<PlatformRequest>
  <Credentials>
    <Username>Your Web Service Username</Username>
    <Password>Your Web Service Password</Password>

AssurePhone

The AssurePhone product returns carrier and phone type information about a provided US phone number. This product will also generate and send a verification code to the provided phone number via text message for mobile numbers and via text-to-speech for landline or VOIP numbers. This product can also be added as an option to the AssureID product.

Service URL

`https://blueassure.evssolutions.com/WebServices/Integrated/Main/V300/AssurePhone`

Input Fields

Field	Required	Notes
PhoneNumber	**Yes**	10-digit US phone number
SendPhoneVerification	No	Send a value of **True** to have a verification code sent as a text message / voice call to the phone number.
ForceVerificationByCall	No	Send a value of **True** to force Phone Verification to be sent by voice call, even if the provided phone number is found to be a mobile phone.

AssurePhone Request XML Example

```
<?xml version="1.0" encoding="utf-8"?>
<PlatformRequest>

AssureWatch

The AssureWatch product returns identities located on government watchlists using as little information as the name of a person or entity. This product can be added as an option to other products offered by EVS.

Service URL

`https://blueassure.evssolutions.com/WebServices/Integrated/Main/V300/AssureWatch`

Input Fields

Field	Individual Required	Entity Required	Notes
EntityName	N/A	**Yes**	Only used when submitting an entity
FirstName	**Yes**	N/A	Only used when submitting an individual
MiddleName	No	N/A	Only used when submitting an individual
LastName	**Yes**	N/A	Only used when submitting an individual
Street	No	No	
City	No	No	
State	No	No	2 character state code
Province	No	No	2 character province code
ZipCode	No	No	
CountryCode	No	No	2 character country code
DateOfBirth	No	No	Only used when submitting an individual. Format: yyyy-MM-dd
IdNumber	No	No	Identification such as SSN or EIN
SimilarityThreshold	No	No	Value between 50 - 100 representing how close name must match for a similarly search. Defaults to 75 when not sent.

AssureFinCEN

The AssureFinCEN product returns identities located on the Financial Crimes Enforcement Network watchlist uploaded into BlueAssure.

Service URL

`https://blueassure.evssolutions.com/WebServices/Integrated/Main/V300/AssureFincen`

Input Fields

Field	Individual Required	Entity Required	Notes
EntityName	N/A	**Yes**	Only used when submitting an entity
FirstName	**Yes**	N/A	Only used when submitting an individual
MiddleName	No	N/A	Only used when submitting an individual
LastName	**Yes**	N/A	Only used when submitting an individual
Generation	No	N/A	SR, JR, I, II, III
Street	No	No	
City	No	No	
State	No	No	2 character state code
ZipCode	No	No	
CountryCode	No	No	2 character country code
SimilarityThreshold	No	No	Value between 50 - 100 representing how close name must match for a similarly search. Defaults to 75 when not sent.
ListId	No	No	The ID of the uploaded FinCEN list. This ID can be found by looking under FinCEN Management in BlueAssure. If no list ID is provided, the most current list will be used automatically.

AssureFinCEN Request XML Example

AssureCard

AssureCard authenticates government issued IDs using images taken of the front and back of the ID. In addition, Card can compare the facial similarity of the image on the ID to a submitted portrait image. A transaction can take anywhere from 10 seconds to a minute to complete at which point the information will be delivered to a callback web hook URL defined by you.

Service URL

`https://blueassure.evssolutions.com/WebServices/Integrated/Main/V300/AssureCard`

Input Fields

Field	Required Direct Upload	Required Mobile Capture	Notes
ScanMode	**Yes**	**Yes**	**DirectImageUpload** or **CaptureViaMobile** or **DeferredRequestLink**
DocumentType	**Yes**	**Yes**	**DriversLicense** or **PassportBook** or **PassportCard**
FrontImage	**Yes**	N/A	Base64 encoded image data in JPG or PNG format
BackImage	**Yes***	N/A	Base64 encoded image data in JPG or PNG format
PortraitImage	No	N/A	Base64 encoded image data in JPG or PNG format
RequireConsumerPortrait	N/A	**Yes**	**Mobile Capture Only**. Send a value of True to require the ID holder to send a self-portrait in addition to the front and back ID images.
Ssn	No	No	**AssureID Option Only.** 4 or 9-digit social security number
PhoneNumber	No	**Yes**	**AssureID & AssurePhone Options Only.** 10-digit phone number
SendPhoneVerification	No	No	**AssurePhone Option Only.** Send a value of True to have a verification code sent as a text message / voice call to the phone number provided in the PhoneNumber field.
ForceVerificationByCall	No	No	**AssurePhone Option Only.** Send a value of True to force Phone Verification to be sent by voice call, even if the provided phone number is found to be a mobile phone.
EmailAddress	No	No	**AssureID Option Only**
IpAddress	No	No	**AssureID Option Only.** IPv4 address. Format: `###.###.###.###`
SimilarityThreshold	No	No	**AssureWatch Option Only.** Value between 50 - 100 representing how close name must match for a similarly search. Defaults to 75 when not sent.

*Back Image is not required for passport books

Upload Images Directly

Images can be uploaded directly to BlueAssure when using the **ScanMode** value **DirectImageUpload**. In this case both **FrontImage** and **BackImage** are required fields (unless the document type is a **PassportBook**) and should include the base 64 encoded data for each image. For more information on image size and format recommendations see *Image Quality & Size Recommendations* below.

Capture Images From Mobile Phone

Images can also be uploaded by the ID holder using the **ScanMode** value **CaptureViaMobile**. In this case a mobile phone number of the ID holder must be provided in the **PhoneNumber** field. A text message will be sent to the mobile number with a link that will allow the ID holder to take images of the front and back of the ID using their phone. The link sent in the text message is only valid for one hour.

Capture Images From Web Portal

Clients can request an image upload link that can be embedded in the client's application or website. In this case, the two requirements are that **ScanMode** value must be **DeferredRequestLink** and the appropriate **DocumentType** be specified. This will return the image capturing link in the XML response rather than sending it to the end consumer via text. This allows you to embed the image capture portal in your website or application. The link sent in the response is only valid for one hour.

Receiving Submitted Images

If you wish to receive the images submitted using the **CaptureViaMobile** or **DeferredRequestLink** modes, you can enable an account option to do so. Go to **My Account → Options**, look in the **Product Options** section, and the option labeled "Enable delivery of consumer-uploaded images to product webhook" should be checked. If it is not, have an account admin enable that option for you by clicking the Edit button at the bottom of the page, selecting that checkbox, and then clicking Save.

With this option enabled, when images are submitted by the end consumer they will be sent to the webhook you have configured (see below under **Asynchronous Request/Response Process**) as base 64-encoded strings in XML nodes (example below).

Image Quality & Size Recommendations

The best way to ensure accurate authentication results is to submit good images that our systems can successfully process.

The minimum image resolution is 800 x 600px, in JPG or PNG file format, with a compression rate of less than 15%. We also recommend keeping file size under 4 MB total and no larger than 1500px in either dimension. Larger files may result in longer processing time or errors.

Asynchronous Request/Response Process

Due to the time it takes to process the images, this product does not return the results to the initial request made to BlueAssure. Instead, you can define a callback URL (webhook) that BlueAssure will send the results to once processing has finished.

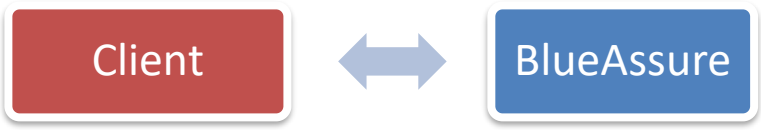

To setup the callback URL and credentials, go to **My Account → Products** and click the button labeled **Edit Webhook** under the **AssureCard** product. The URL must use HTTPS with a valid certificate and must

be a URL that BlueAssure can reach over the internet. If a username and password are entered, all requests to the callback URL will include these credentials via Basic Authentication. It's recommended you password protect the callback URL to restrict access.

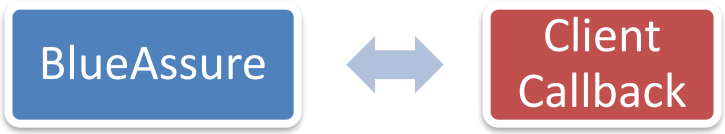

BlueAssure will send a POST request to the callback URL when the transaction completes. The callback URL must return a 2XX response code within 5 seconds indicating the transaction response was successfully received. If something other than a 2XX response is received or if it takes more than 5 seconds for the callback to return, the request will be delayed and then be resent after a short period. If requests continue to fail, then subsequent attempts will be made further in the future adding more time between each attempt. If the request could not be completed after 10 attempts, no further attempts will be made to the callback URL for that transaction. The transaction can still be viewed by logging into the BlueAssure management platform.

Linking the Initial Request and Final Callback

When **ScanMode** is set to **DirectImageUpload**, the same transaction ID will be returned in the initial request and in the request BlueAssure sends to the callback URL. When **ScanMode** is set to **CaptureViaMobile**, you must submit a unique **CustomerReference** value of your own in the initial request. BlueAssure will include your customer reference value submitted in your initial request in the final callback.

1. Client makes initial request to BlueAssure web service passing the images and other input fields listed above.
2. BlueAssure platform queues the work and returns an initial response indicating the request was received or an error indicating why the initial request failed.

1. BlueAssure finishes processing the images and completes the transaction.
2. BlueAssure does an HTTP POST to the client's callback URL sending the results of the transaction.
3. The client callback URL returns a 200 response code within 5 seconds indicating the response has been successfully received.

AssureCard Initial Request (Image Upload) XML Example

AssureFill

The AssureFill product scans the back of an identification card, such as a Driver's License, to read the information encoded in the 2D barcode there and return it in the web service response. Optionally, this information can also be sent to our AssureID, AssurePhone, and/or AssureWatch products and those results included in the service response as well.

Service URL

`https://blueassure.evssolutions.com/WebServices/Integrated/Main/V300/AssureFill`

Input Fields

Field	Required Direct Upload	Required Mobile Capture	Notes
ScanMode	**Yes**	**Yes**	**DirectImageUpload** or **CaptureViaMobile** or **DeferredRequestLink**
BackImage	**Yes**	N/A	Base64 encoded image data in JPG or PNG format
Ssn	No	No	**AssureID Option Only.** 4 or 9-digit social security number
PhoneNumber	No	**Yes**	**AssureID & AssurePhone Options Only.** 10-digit phone number
SendPhoneVerification	No	No	**AssurePhone Option Only.** Send a value of True to have a verification code sent as a text message / voice call to the phone number provided in the PhoneNumber field.
ForceVerificationByCall	No	No	**AssurePhone Option Only.** Send a value of True to force Phone Verification to be sent by voice call, even if the provided phone number is found to be a mobile phone.
EmailAddress	No	No	**AssureID Option Only**
IpAddress	No	No	**AssureID Option Only.** IPv4 address. Format: `###.###.###.###`
SimilarityThreshold	No	No	**AssureWatch Option Only.** Value between 50 - 100 representing how close name must match for a similarly search. Defaults to 75 when not sent.

Image Quality & Size Recommendations

The best way to ensure accurate authentication results is to submit good images that our systems can successfully process.

The minimum image resolution is 800 x 600px, in JPG or PNG file format, with a compression rate of less than 15%. We also recommend keeping file size under 4 MB total and no larger than 1500px in either dimension. Larger files may result in longer processing time or errors.

Upload Images Directly

Images can be uploaded directly to BlueAssure when using the **ScanMode** value **DirectImageUpload**. In this case **BackImage** is a required field and should include the Base64-encoded data for the image of the back of the ID. For more information on image size and format recommendations see *Image Quality & Size Recommendations* above.

Capture Images From Mobile Phone

Images can also be uploaded by the ID holder using the **ScanMode** value **CaptureViaMobile**. In this case a mobile phone number of the ID holder must be provided in the **PhoneNumber** field. A text message will be sent to the mobile number with a link that will allow the ID holder to take images of the back of the ID using their phone. The link sent in the text message is only valid for one hour.

If a request is submitted this way via the web service API, you must provide a unique **CustomerReference** identifier in the request. This is how you will know which response via the webhook callback is connected to that request. An initial stub XML response is returned with a 200 HTTP code to such requests, but no data can be returned and a transaction ID is not created until the customer submits the requested data at the link in the text message. This stub response will follow the same format as the response XML example below, but with an empty `<Response>` element.

Capture Images From Web Portal

Clients can request an image upload link that can be embedded in the client's application or website. In this case, the only requirement is that **ScanMode** value must be **DeferredRequestLink**. This will return the image capturing link in the XML response rather than sending it to the end consumer via text. This allows you to embed the image capture portal in your website or application. The link sent in the response is only valid for one hour.

As above, a request submitted this way must have a unique **CustomerReference** so the webhook response can be connected to the request.

Receiving Submitted Images

If you wish to receive the image submitted using the **CaptureViaMobile** or **DeferredRequestLink** modes, you can enable an account option to do so. Go to **My Account → Options**, look in the **Product Options** section, and the option labeled “Enable delivery of consumer-uploaded images to product webhook” should be checked. If it is not, have an account admin enable that option for you by clicking the Edit button at the bottom of the page, selecting that checkbox, and then clicking Save.

With this option enabled, when an image is submitted by the end consumer it will be sent to the webhook you have configured (see below under **Asynchronous Request/Response Process**) as a base 64-encoded string in XML nodes (example below).

AssureLocate

AssureLocate determines the likelihood that your customer is using a VPN to hide their location. The customer is directed to a unique link to a portal that collects location information from their device and IP address. This information is used to calculate the probability they are using a VPN. The factors used to make this determination are fully configurable through the product's settings page and the workflow editor.

Service URL

`https://blueassure.evssolutions.com/WebServices/Integrated/Main/V300/AssureLocate`

Input Fields

Field	Required	Notes
PhoneNumber	**Yes***	10-digit phone number. *Required for Capture Via Mobile
ScanMode	**Yes**	"CaptureViaMobile" or "DeferredRequestLink"

Test Data

Use the below data in your request to receive a canned/dummy response for testing purposes. There are no transaction charges associated with using the below test data. Note: test transactions must be enabled for your account for this feature to work.

Response Type	PhoneNumber
Low Probability of VPN	5552225555
High Probability of VPN	5555555555

Date of Birth Result Codes

Code	Definition	Explanation	Match Summary
1	Match	Full DOB available and matched input (within 1 year plus/minus if month/day exact).	Match
2	Partial match	YOB only matches (within 1 year plus/minus).	Match
3	No match	Input DOB does not match on file DOB.	No match
4	Not on file	DOB or YOB information not available for this consumer (consumer is on file).	Match not performed
5	SSN not on file; search cannot be done	Consumer not on file – no record.	Match not performed
6	DOB not provided on inquiry	DOB not on input.	Match not performed
7	Invalid date format	Date format is invalid.	Match not performed
8	Year only exact match	YOB only exact matches (no plus/minus 1 year allowance)	Match
9	Day, month, and year exact match	Full DOB available and exact matched input (no plus/minus 1 year allowance)	Match
A	Month exact match, year match +/- 1 year	MOB exact match, YOB match (within 1 year plus/minus)	Match
B	Month and year exact match	MOB and YOB exact match (no plus/minus 1 year allowance)	Match
C	Day of Birth and Month of Birth exact match, Year of Birth +/- 10 years exactly	Day of Birth and Month of Birth exact match, Year of Birth +/- 10 years exactly	Match
D	Month of Birth exact match, Year of Birth +/- 10 years exactly	Month of Birth exact match, Year of Birth +/- 10 years exactly	Match
E	Day & month exact match, year not match	Day, MOB exact match, YOB no match	Match

Fraud Shield Results

Each fraud shield returns either 'Y' indicating the fraud shield was triggered or 'N' if the fraud shield was not triggered. The table below defines the triggered state of each fraud shield.

Fraud Shield	Description
Fraud Shield 01	Inquiry/Online current address conflict
Fraud Shield 02	Inquiry address first reported < 90 days
Fraud Shield 03	Inquiry current address not on-file
Fraud Shield 04	Input SSN issue date cannot be verified
Fraud Shield 05	Input SSN recorded as deceased
Fraud Shield 06	Inquiry age younger than SSN issue date
Fraud Shield 07	Credit established before age 18
Fraud Shield 08	Credit established prior to SSN issue date
Fraud Shield 09	More than 3 inquires in last 30 days
Fraud Shield 10	Type of high risk address
Fraud Shield 11	Non-residential address
Fraud Shield 13	High probability SSN belongs to another person
Fraud Shield 14	Input SSN invalid
Fraud Shield 15	Address reported cautious
Fraud Shield 16	Type of high risk address
Fraud Shield 17	Non-residential address
Fraud Shield 18	Reported cautious
Fraud Shield 19	Current address reported by new trade only
Fraud Shield 20	Current address reported by trade open <90 days
Fraud Shield 21	Telephone number inconsistent with address
Fraud Shield 25	Best on-file SSN recorded as deceased
Fraud Shield 26	Best on-file SSN issue data cannot be verified
Fraud Shield 27	SSN Reported more frequently for another person

Exclusion Conditions

Code	Summary	Description
9001	Consumer reported as deceased	The consumer is reported as deceased.
9012	Consumer/Victim Statement on-file	A Consumer/Victim Statement has been placed on the consumer's credit file.
9013	Blocked or Frozen credit file	The consumer's credit file has been blocked or frozen.
9017	Consumer is a Nevada resident	The consumer is a resident of the state of Nevada.

Shared Application Result Codes

Code	Summary	Description
1004	Non-Residential Current Address	The home address provided in the current application is a business address.
1005	Current Address is High-Risk	The home address provided in the current application is a business address having potential for fraudulent activity.
1006	Fraud Shield Cautious Address Found – Incoming Address	Fraud had been perpetrated at the address provided in the current application.
1007	Fraud Shield Cautious Address Found – On File Address	Fraud has been perpetrated at one of the addresses associated with the current application's Credit Profile.
1008	High Risk Address On File	One of the addresses in the current application's Credit Profile is a business address having a potential for fraudulent activity.
1009	Non-Residential Address On File	One of the addresses in the current application's Credit Profile is a business.
1010	Incoming Address First Reported Within 90 Days	The current address provided in the current application was first reported within the last 90 days.
1201	Combined Time at Address Exceeds Applicant's Age	The time at all addresses provided in the current application is greater than the applicant's age provided in the current application.
1402 / 1452	Adjusted Time at Current Address Mismatched	The incoming application shows that the applicant has lived in the current address longer than the time implied by a past application (6 – 120 month tolerance allowed based on length of time).
1403 / 1453	Previous Address Mismatched	The incoming application omits a previous address that is present on a past application.
1404 / 1454	Time at Previous Address Mismatched	The incoming application shows that the applicant has lived in the previous address longer than the time implied by a past application (6 – 120 month tolerance allowed based on length of time).
1406 / 1456	Accommodation Type Mismatched	The current address provided in the current application is equal to the matched application current address AND the current application accommodation type is unequal to the matched application accommodation type (owns, rents, lives with parents, others).
1413 / 1463	Impersonation – Time at Current Address	The incoming application shows that the applicant has lived in the current address for a shorter period than the time implied by a past application (6 – 120 month tolerance allowed based on length of time).
1414 / 1464	Impersonation – Time at Previous Address	The incoming application shows that the applicant has lived in the previous address for a shorter period than the time implied by a past application (6 – 120 month tolerance allowed based on length of time).
1417 / 1467	Historic Address Identified	The current address provided in the current application is not equal to the matched application current address AND the current application previous address is not equal to the matched application previous address. OR The current address provided in the current application is not equal to the matched application current address AND the matched application contains a previous address, which the current application omits.
1423/1473	Inconsistent Time at Address Cross Check	The incoming application contains a previous address that is equal to the current address of a past matched application, but the time at that address is not consistent with what is implied in the past application (6 – 120 month tolerance allowed based on length of time).

Shared Application Result Codes (CONT'D)

Code	Summary	Description
1424 / 1474	Inconsistent Move Date	The incoming application contains a previous address that is equal to the current address of a past matched application, but the implied move date to that address is not consistent with the implied move date in the past application (6 – 120 month tolerance allowed based on length of time).
1602	Adjusted Time at Current Address	The incoming application shows that the applicant has lived in the current address longer than the time implied by a past application (6 – 20 month tolerance allowed based on length of time).
1603	Previous Address Mismatched	The incoming application omits a previous address that is present on a past application.
1604	Time at Previous Address Mismatched	The incoming application shows that the applicant has lived in the previous address longer than the time implied by a past application (6 – 120 month tolerance allowed based on length of time).
1606	Accommodation Type Mismatched	The current address provided in the current application is equal to the matched application current address AND the current application accommodation type is unequal to the matched application accommodation type (owns, rents, lives with parents, others).
1613	Impersonation – Time at Current Address	The incoming application shows that the applicant has lived in the current address for a shorter period than the time implied by a past application (6 – 120 month tolerance allowed based on length of time).
1614	Impersonation – Time at Previous Address	The incoming application shows that the applicant has lived in the previous address for a shorter period than the time implied by a past application (6 – 120 month tolerance allowed based on length of time).
1617	Historic Address Identified	The current address provided in the current application is not equal to the matched application current address AND the current application previous address is not equal to the matched application previous address. OR The current address provided in the current application is not equal to the matched application current address AND the matched application contains a previous address, which the current application omits.
1623	Inconsistent Time at Address Cross Check	The incoming application contains a previous address that is equal to the current address of a past matched application, but the time at that address is not consistent with what is implied in the past application (6 – 120 month tolerance allowed based on length of time).
1624	Inconsistent Move Date	The incoming application contains a previous address that is equal to the current address of a past matched application, but the implied move date to that address is not consistent with the implied move date in the past application (6 – 120 month tolerance allowed based on length of time).
2801 / 2851	Same Address Connection	The current address provided in the current application is equal to the connected application current address AND the current application applicant name is not equal to the connected application applicant name.
3201	Incoming Application Omits Best Address on File	The "best address" per the Credit Profile is not present on the current application.
3202	Incoming Previous Address is Best Address On File	The "best address" per the Credit Profile is equal to the previous address on the current application.
3203	No Trace of Address	The current address provided in the current application does not match an address On file has for this applicant.
3204	Best address on credit profile does not match the current address specified on inquiry	

Shared Application Result Codes (CONT'D)

Code	Summary	Description
3401	Additional Addresses (0 – 1)	Any of the three Credit Profile addresses are missing from the current application and the Credit Profile address was 1st reported less than 1 year ago.
3402	Additional Addresses (1 – 2)	Any of the three Credit Profile addresses are missing from the current application and the Credit Profile address was 1st reported between 1 and 2 years ago.
3403	Additional Addresses (2 – 3)	Any of the three Credit Profile addresses are missing from the current application and the Credit Profile address was 1st reported between 2 and 3 years ago.
3404	Additional Addresses (3 – 4)	Any of the three Credit Profile addresses are missing from the current application and the Credit Profile address was 1st reported between 3 and 4 years ago.
3405	Additional Addresses (4 – 5)	Any of the three Credit Profile addresses are missing from the current application and the Credit Profile address was 1st reported between 4 and 5 years ago.
3406	Additional Addresses (5 – 6)	Any of the three Credit Profiles addresses are missing from the current application and the Credit Profile address was 1st reported between 5 and 6 years ago.
1001	Home Telephone Number Conflicts with Zip Code	The home telephone number provided in the current application does not correlate to the current address provided in the current application.
1203	Home Telephone Number is Invalid	The home telephone provided in the current application had an invalid exchange and area code combination.
1204	Home Telephone Number is Cellular or other Special	The home telephone number provided in the current application is a cellular number or defined as special.
1207	Self-Employed with no Home Telephone	The current application states the applicant is self employed but does not include a home telephone number.
1208	Not Self-Employed but Same Home and Work Telephone	The current application states the applicant is not self employed but the home and work number on the current application is the same.
1209	Work Telephone Number is Unused or Reserved	The work telephone number provided in the current application is reported as expired or is not yet connected for use.
1407 / 1457	Home Telephone Number Mismatched	The current address provided in the current application is equal to the matched application current address AND the current application home telephone number is not 'special' AND does not equal the matched application updated home telephone number.
1410 / 1460	Work Telephone Number Mismatched	The work telephone number provided in the current application is not 'special' AND it is not equal to the matched application updated work telephone number.
1607	Home Telephone Number Mismatched	The current address provided in the current application is equal to the matched application current address AND the current application home telephone number is not 'special' AND does not equal the matched application updated home telephone number.
1610	Work Telephone Number Mismatched	The work telephone number provided in the current application is not 'special' AND it is not equal to the matched application updated work telephone number.
1801 / 1851	Same Person Home Telephone Connection	The home telephone number from the incoming application is equal to a past application's update home telephone number where the past application is for the same person as the incoming application AND The current and previous address provided in the current application is not equal to the connected application current address.

Shared Application Result Codes (CONT'D)

Code	Summary	Description
1802 / 1852	Other Person Home Telephone Connection	The home telephone number from the incoming application is equal to a past application's update home telephone number where the past application is for a different person as the incoming application AND The current and previous address provided in the current application is not equal to the connected application current address.
1803 / 1853	Multiple Same Person Home Telephone Connections	This rule will trigger if Rule 1801/1851: Same Person Home Telephone Connection is triggered by more than one connected application.
1804 / 1854	Multiple Other Person Home Telephone Connections	This rule will trigger if Rule 1802/1852: Other Person Home Telephone Connection is triggered by more than one connected application.
2201 / 2251	Same Person Work Telephone Connection	The applicant name and work telephone number provided in the current application is equal to the connected application applicant name and updated work telephone number AND The current and previous address provided in the current application is not equal to the connected application current address.
2202 / 2252	Other Person Work Telephone Connection	The work telephone number provided in the current application is equal to the connected application updated work telephone number AND The applicant name in the current application is not equal to the connected application applicant name AND the current and previous address provided in the current application is not equal to the connected application current address.
2203 / 2253	Multiple Same Person Work Telephone Connections	This rule will trigger if Rule 2201/2251: Same Person Work Telephone Connection is triggered by more than one connected application.
2204 / 2254	Multiple Other Person Work Telephone Connections	This rule will trigger if Rule 2202/2252: Other Person Work Telephone Connection is triggered by more than one connected application.
2205 / 2255	Other Person Work Phone Connection w/ Same Address	The current address and work telephone number provided in the current application is equal to the connected application current address and updated work telephone number AND The applicant name in the current application is not equal to the connected application applicant name.
3006	Telephone Number(s) not On File	
3007	Home Telephone Number Conflict	The home telephone number provided in the current application is not equal to any of the consumer's home telephone number(s) on the Credit Profile, as updated for area code splits.
3008	Shared Home Telephone Number	The number of other consumers who share the same home telephone number on the Consumer Master database is greater than 4.
1013	Driver's License Number Conflict	The driver's license number provided in the current application is not equal to the driver's license number on file.
1213	Driver's License from Previous State	The incoming application shows that the applicant has moved to a new state and has been living there for at least 9 months but kept his old state's driver's license.
1421 / 1471	Driver's License Mismatch – Same State	The driver's license state provided in the current application is equal to the driver's license state provided in the matched application AND the current application driver's license number is not equal to the matched application driver's license number. (Allow one single-digit error or one transposition of adjacent digits.)

Shared Application Result Codes (CONT'D)

Code	Summary	Description
1422 / 1472	Driver's License Mismatch – Different State	The driver's license state provided in the current application is not equal to the driver's license state provided in the matched application AND the current application driver's license number is not equal to the matched application driver's license number. (Allow one single-digit error or one transposition of adjacent digits.) AND the elapsed time between current and matched applications is under 90 days. OR The driver's license state provided in the current application is not equal to the driver's license state provided in the matched application AND the current application driver's license number is not equal to the matched application driver's license number. (Allow one single-digit error or one transposition of adjacent digits.) AND the current application current address is equal to the matched application current address.
1621	Driver's License Mismatch – Same State	The driver's license state provided in the current application is equal to the driver's license state provided in the matched application AND the current application driver's license number is not equal to the matched application driver's license number. (Allow one single-digit error or one transposition of adjacent digits.)
1622	Driver's License Mismatch – Different State	The driver's license state provided in the current application is not equal to the driver's license state provided in the matched application AND the current application driver's license number is not equal to the matched application driver's license number. (Allow one single-digit error or one transposition of adjacent digits.) AND the elapsed time between current and matched applications is under 90 days. OR The driver's license state provided in the current application is not equal to the driver's license state provided in the matched application AND the current application driver's license number is not equal to the matched application driver's license number. (Allow one single-digit error or one transposition of adjacent digits.) AND the current application current address is equal to the matched application current address.
2601 / 2651	Same Person Driver's License Number Connection	The DL number and DL state provided in the current application is equal to the connected application DL number and DL state. (DL number exact match) AND The current and previous address provided in the current application is not equal to the connected application current address. AND The applicant name in the current application is equal to the connected application applicant name.
2602 / 2652	Other Person Driver's License Number Connection	The DL number and DL state provided in the current application is equal to the connected application DL number and DL state. (DL number exact match) AND The current and previous address provided in the current application is not equal to the connected application current address. AND The applicant name in the current application is not equal to the connected application applicant name.
2603 / 2653	Multiple Same Person DL Number Connections	This rule will trigger if Rule 2601/2651: Same Person DL Number Connection is triggered by more than one connected application.
2604 / 2654	Multiple Other Person DL Number Connections	This rule will trigger if Rule 2602/2652: Other Person DL Number Connection is triggered by more than one connected application.
1002	Invalid or Non-issued Social Security Number	The social security number (SSN) provided in the current application has not been issued by the Social Security Administration (SSA) OR the SSN is not a valid number as reported by the SSA.
1003	Social Security Number Issued before Year of Birth	The social security number provided in the current application has an issue date that is less than the age of the applicant provided in the current application.

Shared Application Result Codes (CONT'D)

Code	Summary	Description
1012	High Probability SSN Belongs to Another	The social security number provided in the current application is more closely associated with another consumer.
1014	Retired Social Security Number	SSA reports that death benefits are being paid on the SSN
1015	Non-issued SSN	
1016	Best on-file SSN is retired	
1017	Best on-file SSN is not issued	
1018	SSN specified on inquiry has been reported more frequently for another	
1420 / 1470	Social Security Number Mismatch	The social security number provided in the current application is not equal to the matched application social security number.
1620	Social Security Number Mismatch	The social security number provided in the current application is not equal to the matched application social security number.
2401 / 2451	Same Person Social Security Number Connection	The applicant name and social security number provided in the current application is equal to the connected application applicant name and updated social security number (exact match) AND The current and previous address provided in the current application is not equal to the connected application current address.
2402 / 2452	Other Person Social Security Number Connection	The social security number provided in the current application is equal to the connected application social security number (exact match) AND The applicant name in the current application is not equal to the connected application applicant name AND the current and previous address provided in the current application is not equal to the connected application current address.
2403 / 2453	Multiple Same Person SSN Connections	This rule will trigger if Rule 2401/2451: Same Person SSN Connection is triggered by more than one connected application.
2404 / 2454	Multiple Other Person SSN Connections	This rule will trigger if Rule 2402/2452: Other Person SSN Connection is triggered by more than one connected application.
1401 / 1451	Date of Birth Mismatched	The current application date of birth is less than the matched application date of birth. (within a specified tolerance)
1412 / 1462	Impersonation – Age	The applicant date of birth provided in the current application is greater than the date of birth provided on the matched application.
1601	Date of Birth Mismatched	The current application date of birth is earlier than the matched application date of birth. (within a specified tolerance)
1612	Impersonation – Age	The applicant date of birth provided in the current application is greater than the date of birth provided on the matched application.
3002	Impersonation of Applicant under Age 18	The current application and Credit Profile contain date of birth AND the Credit Profile Date of Birth implies that the applicant is under age 18 AND the current application date of birth is not equal to the Credit Profile's Date of Birth. OR The current application and/or Credit Profile contain only year of birth AND the Credit Profile date of Birth implies that the applicant is under age 18 (Infer "January 1" if the Credit Profile contains only the year of birth.) AND the current application year of birth is not equal to the Credit Profile's year of birth.

Shared Application Result Codes (CONT'D)

Code	Summary	Description
3003	Inconsistent Date of Birth on File	The current application and Credit Profile contain date of birth AND the current application date of birth is less than the Credit Profile date of birth. OR The current application and/or Credit Profile contain only year of birth AND the current application year of birth is less than the Credit Profile year of birth.
3004	Impersonation – Age	The current application and Credit Profile contain date of birth AND the current application date of birth is greater than the Credit Profile date of birth. OR The current application and/or Credit Profile contain only year of birth AND the current application year of birth is greater than the Credit Profile year of birth.
1427 / 1477	Under 18 at Time of Matched Application	The age on the matched application is less than 18.
1627	Under 18 at Time of Matched Application	The age on the matched application is less than 18.
3001	Consumer Not Found	This rule will trigger if the applicant cannot be identified such that a Credit Profile cannot be generated.
3005	Consumer Statement on File	The Credit Profile contains a free form consumer statement other than a victim statement.

Email Verification Result Codes

Code	Summary	Description
T1	Match found	Match to Name associated with Email in repository
T2	Match found	Exact input Name to Username match
T3	Match found	Strong Input Name to Username Match
T4	Match found	Partial Input Name to Username Match
T5	No match found	Username to Name Mismatch or email linked to different Name in repository
T6	No match performed	Email failed validation or no input name

Email Validation Result Codes

Code	Summary	Description
I	Invalid	Email address is not valid
N	No match performed	No input or cannot be validated
V	Match found	Possible valid email address

Email Reason Result Codes

Code	Summary	Description
D	Domain Validation Failure	Domain Validation Failure – an MX record could not be located for the registered domain
N	No Failure Identified	No Failure Identified – the email had proper syntax and domain
S	Syntax Validation Failure	Syntax Validation Failure – the email address did not have the proper syntax

Email Repository Result Codes

Code	Summary	Description
N	No match found	Email address not found in repository/Unknown
Y	Match found	Email address found in repository

IP Address Verification Result Codes - City

Code	Summary	Description
1	Match to Input	IP Matches to Input City
2	No Match to Input	IP Does Not Match to Input City
3	No Data	No City Data Available
4	IP Not Available	IP Address Not Available

IP Address Verification Result Codes - State

Code	Summary	Description
1	Match to Input	IP Matches to Input State
2	No Match to Input	IP Does Not Match to Input State
3	No Data	No State Data Available
4	IP Not Available	IP Address Not Available

IP Address Verification Result Codes – Zip Code

Code	Summary	Description
1	Match to Input	IP Matches to Input Zip Code
2	No Match to Input	IP Does Not Match to Input Zip Code
3	No Data	No Zip Code Data Available
4	IP Not Available	IP Address Not Available

IP Address Verification Result Codes – Country

Code	Summary	Description
1	Match to US	IP Address Matches to US or US Territory
2	Match no US	IP Address Matches to a Foreign Country (outside of US)
3	No Data	No Country Data Available
4	IP Not Available	IP Address Not Available
5	Reserved/Private	IP Address is Classified as Reserved or Private, Unable to Retrieve Data
6	Unknown	Country Associated with IP is Unknown

Card Document Validation Result Codes

Code	Summary	Description
0	OK	The document has passed the check.
1	Fake	The document has evidence of forgery.
2	Expired	The document has expired.
E	Error	There was an unknown problem processing the document.

Card Image Parsing Result Codes

Code	Summary	Description
B	Both sides parsed	Both sides of the document were successfully parsed.
F	Front side parsed	Only the front side of the document was successfully parsed.
R	Rear side parsed	Only the rear side of the document was successfully parsed.
X	Neither side parsed	Neither side of the document was successfully parsed.
E	Error	There was an error while processing the request.

Fill Document Validation Result Codes

Code	Summary	Description
V	Valid	Successfully processed the image and the document appears valid.
I	Invalid	Document appears invalid.
E	Error	There was an unknown problem processing the ID.

Fill Document Expiration Result Codes

Code	Summary	Description
NE	Not Expired	The document has not expired.
EXP	Expired	The document has expired.
NF	Not Found	The document does not contain an Expiration Date field.
E	Error	There was an unknown problem processing the ID.

Legacy Address Verification Result Codes

Code	Definition	Explanation	Match Summary
A	Address ambiguous	Necessary elements missing from address. Multiple address matches found but input address is not specific enough to obtain single match.	Validation failed, match not performed
B	Match to business name - Residential address	Used on business searches only. Business found at address from residential file.	Match
BB	Match to business name - Business address	Used on business searches only. Business found at the supplied address.	Match
BM	Match to business name - Mixed use address	Used on business searches only. Business found in both business and residential files.	Match
E	Matching records exceed maximum defined on profile	Code not utilized.	N/A
H	House number not found on street	Street number invalid for this street. Not a deliverable address.	Validation failed,
I	Incomplete or blank address	Address not complete.	Validation failed, match not performed
N	No match to name - Residential address	Address confirmed residential. Database record indicates different consumer name at this address.	No match
NB	No match to name - Business address	Address found on business file. Consumer name not associated with address.	No match
NM	No match to name - Mixed use address	Address found in both business and residential files. Consumer name not associated with address.	No match
NS/SX	Standardization database has expired		N/A
R	Road name - City/Zip mismatch	Failed address standardization due to street name not existing in city or zipcode.	Validation failed, match not performed
S	Match to surname - Residential address	Address confirmed residential. Input last name matches (household-level match).	Match
SB	Match to surname - Business address	Address on business file. Input last name matches (household-level match).	Match
SM	Match to surname - Mixed use address	Address found in both business and residential files. Input last name matches (household-level match).	Match
T	City/State mismatch	Failed address standardization due to city not existing in state.	Validation failed, match not performed
U	Address unverifiable - Not in database	Address passed standardization, but is not is the database.	Match not performed
UR	Address residential - Name match unavailable	Address passed standardization and is found on the residential file. No record as to resident for name match.	Match not performed

Legacy Address Verification Result Codes (CONT'D)

Code	Definition	Explanation	Match Summary
Y	Match to full name - Residential address	Address confirmed residential. Input last name matches (household-level match).	Match
YB	Match to full name - Business address	Address found on business file. Input name matches.	Match
YM	Match to full name - Mixed use address	Address found in both business and residential files. Input full name matches (household-level match).	Match
Z	City/State Zip mismatch	Failed address standardization.	Validation failed, match not performed
P	Match to full name - Previous address	Address matches to previous address. Input name matches.	Match

Legacy Phone Verification Result Codes

Code	Definition	Explanation	Match Summary
A	Match to address only - Residential phone	Phone matches address.	Match
AB	Match to address only - Business phone	Phone matches address. Address found in business file.	Match
AM	Match to address only - Mixed-use phone	Phone matches address. Address found in both business and residential files.	Match
B	Match to business name and address - Residential phone	Used for business searches only. Phone is found in residential files, but matches business name on input.	Match
BB	Match to business name and address - Business phone	Used for business searches only. Phone matches business name and address.	Match
BM	Match to business name and address - Mixed use phone	Used for business searches only. Phone is found in both residential and business files. Matches business name and address.	Match
C	Probable cellular phone	Phone is classified as mobile, PCS or cellular. Based on area code/exchanges reported for cell phones	Match not performed
D	Match to business name - Residential address	Used for business searches only. Phone in residential file matches business name.	Match
DB	Match to business name -Business address	Used for business searches only. Phone matches business name only.	Match
DM	Match to business name - Mixed use phone	Used for business searches only. Phone is found in both residential and business files. Phone matches business name only.	Match
E	Matching records exceed maximum defined in profile	Code not utilized.	N/A
F	Match to full name only -Residential phone	Phone matches full name.	Match

Legacy Phone Verification Result Codes (CONT'D)

Code	Definition	Explanation	Match Summary
FB	Match to full name only -Business phone	Phone matches full name. Phone was found in business file.	Match
FM	Match to full name only - Mixed-use phone	Phone matches full name. Phone was found in both business and residential files.	Match
H	Match to surname and address - Residential phone	Phone matches last name and address (household-level match).	Match
HB	Match to surname and address - Business phone	Phone matches last name and address (household-level match). Phone was found in business file.	Match
HM	Match to surname and address - Mixed-use phone	Phone was found in both business and residential files. Phone matches last name and address (household-level match).	Match
I	Phone is incorrect length	Phone is not 10 digits.	Validation failed, match not performed
IA	Invalid area code	Area code is invalid.	Validation failed, match not performed
M	Phone Missing - Search information not received	Phone not supplied on search request.	Match not performed.
MA	Match to header data	Phone matched to header information	Match
N	No match to name or address - Residential phone	Phone does not match input name or address.	No match
NA	Data not available	Code not utilized.	N/A
NB	No match to name or address - Business phone	Phone found in business file but does not match input name or address.	No match
NM	No match to name or address - Mixed-use phone	Phone was found in both business and residential files. No match to input name or address.	No match
P	Probable pager	Phone is classified as a pager. Based on area code/exchanges reported for pagers.	Match not performed.
S	Match to surname only - Residential phone	Phone matches input last name only.	Match
SB	Match to surname only - Business phone	Phone matches input last name only and found on business file.	Match
SM	Match to surname only - Mixed-use phone	Phone was found in both business and residential files. Phone matches last name only.	Match
U	Phone unverifiable - Not in database	Phone valid and consistent with address. Phone not in database for name/address verification, primarily due to being unlisted.	Match not performed.

Legacy Phone Verification Result Codes (CONT'D)

Code	Definition	Explanation	Match Summary
X	Prefix-Zip mismatch	Phone does not match the address.	Validation failed, match not performed
Y	Match to full name and address - Residential phone	Phone matches input name and address.	Match
YB	Match to full name and address - Business phone	Phone matches input name and address, but found in business file.	Match
YM	Match to full name and address - Mixed-use phone	Phone was found in both business and residential files. Phone matches input name and address.	Match

Appendix B: AssureCanada Match Codes

Address Result Codes

Code	Description	Value
AA_BD999	Is address affiliated with date of birth?	Boolean
AA_FN999	Is address affiliated with full name?	Boolean
AA_GI999	Is address affiliated with government ID?	Boolean
AA_LN999	Is address affiliated with family name?	Boolean
AA_OV999	Is address affiliated with any other PII element?	Boolean
AI_OT_S001	Is address valid?	Boolean
AI_OV_S007	Is address associated with fraud records?	Boolean
AT_AA_S001	Address risk score	0-100
AT_AA_S002	Is address affiliated with input PII?	Boolean
AT_ATRC001	Is address trusted?	Boolean
AV_AV_S001	Is address verified?	Boolean

Credit File Result Codes

Code	Description	Value
CFI_ANM_CA	Request address does not match current address in database	Boolean
CFI_ANM_F1	Request address does not match former address 1 in database	Boolean
CFI_ANM_F2	Request address does not match former address 2 in database	Boolean
CFI_CFA_01	Age of credit file is less than six months	Boolean
CFI_CFA_02	Age of credit file is six months or greater	Boolean
CFI_CFA_03	Age of credit file is less than three years	Boolean
CFI_CFA_04	Age of credit file is three years or greater	Boolean
CFI_CFH_00	Unable to confirm credit file history	Boolean
CFI_CFH_01	Credit file history is less than six months	Boolean
CFI_CFH_02	Credit file history is equal to or greater than six months	Boolean
CFI_CFL_00	No credit file located or poor match score	Boolean
CFI_CFL_01	Credit file located - Good match	Boolean
CFI_CFL_02	Credit file located - Adequate match	Boolean
CFI_CFL_03	Credit file located - Possible match	Boolean
CFI_COT_02	Credit file has more than 2 open trades	Boolean
CFI_DOB_00	Request age does not match the calculated age on the credit file	Boolean
CFI_DOB_01	Request age matches the calculated age on the credit file	Boolean
CFI_DOB_18	Calculated age on the credit file is 18 or greater	Boolean

CFI_DOB_19	Calculated age on the credit file is 19 or greater	Boolean
CFI_DOB_21	Calculated age on the credit file is 21 or greater	Boolean
CFI_DOB_NP	Date of birth is not present on the credit file	Boolean
CFI_NCA_30	Current address is new within 30 days on the credit file	Boolean
CFI_NNV_FN	First name not validated	Boolean
CFI_NNV_LN	Last name not validated	Boolean
CFI_NPR_00	No phone record located or poor match score	Boolean
CFI_SIN_MM	Social Insurance Number mismatch	Boolean
CFI_SIN_NV	Social Insurance Number is not valid	Boolean
CFI_WID_LS	Wallet or identification is lost or stolen	Boolean
CFI_WRN_IF	WARNING: Request-only file	Boolean
CFI_WRN_NF	WARNING: Age of credit file is under one month	Boolean
CFI_WRN_SI	WARNING: Request Social Insurance Number has not yet been issued	Boolean
CFI_WRN_SM	WARNING: Request Social Insurance Number has been reported misused. Thorough verification suggested	Boolean
CFI_WRN_TF	WARNING: Thin file	Boolean
CFI_WRN_TS	WARNING: Temporary SIN	Boolean

Name Result Codes

Code	Description	Value
NA_AF999	Is full name affiliated with address?	Boolean
NA_FN999	Is full name affiliated with date of birth?	Boolean
NA_GV999	Is full name affiliated with government ID?	Boolean
NA_LN999	Is family name affiliated with date of birth?	Boolean
NA_OV999	Is full name affilated with any other PII element?	Boolean

Fraud Insight Result Codes

Code	Description	Value
FVI_FV_S001	Is fraud victim warning present and information blocked due to identity theft?	Boolean
FVI_FV_S005	Is fraud victim alert present?	Boolean
FVI_OV_S001	Fraud risk level	“H”, “M”, or “L”

Date of Birth Result Codes

Code	Description	Value
DOBA_AA999	Is date of birth affiliated with address?	Boolean
DOBA_FN999	Is date of birth affiliated with full name?	Boolean
DOBA_GI999	Is date of birth affiliated with government ID?	Boolean
DOBA_OV999	Is date of birth affiliated with any other PII element?	Boolean

Deceased Result Codes

Code	Description	Value
DE_IM_S001	Is the individual deceased?	Boolean

Appendix C: AssureWatch Match Codes

AssureWatch Field-Level Result Codes

The below match codes indicate the possible results for the submitted ID Number, Name, Address, and/or Date of Birth.

Name results include FirstName, MiddleName, and LastName for individuals, or just EntityName for entities.

Address results include Street, City, State, Province, ZipCode, and CountryCode.

Code	Definition	Explanation	Match Summary
E	Exact Match	Exact match to the submitted value	Match
R	Reverse Exact Match	Exact match when the submitted value is reversed. For example, when last name and first name are reversed.	Match
P	Partial Match	Submitted value matches part of the value on record. For example, the year of submitted date of birth matches the year of a date of birth on record.	Partial Match
S	Similar Match	Submitted value is similar to the value on record. For example, “John Test” will be similar to “Jon Test”.	Similar Match
N	No Match	No match found between submitted value and values on the record.	No Match
NF	Not on File	No records found for this field. For example, a “John Test” was found that matched to the submitted name, but no dates of birth are on file for that record.	No Match
NS	Not Submitted	This field was not submitted in the request.	No Match

Appendix D: AssureFinCEN Match Codes

AssureFinCEN Validation Result Codes

Code	Definition	Explanation	Match Summary
FA	Match to full name and address	Inquiry full name and address matches name and address on FinCEN list.	Match
FP	Match to full name and partial address	Inquiry full name matches name on FinCEN list. Address partially matches address on file.	Match
F	Match to full name	Inquiry full name matches name on FinCEN list.	Match
RA	Match to name when input is reversed and full address	Inquiry full name matches name on FinCEN list when inquiry name is reversed. Address matches FinCEN list exactly.	Match
RP	Match to name when input is reversed and partial address	Inquiry full name matches name on FinCEN list when inquiry name is reversed. Address matches partially.	Match
R	Match to name when input is reversed	Inquiry full name matches name on FinCEN list when inquiry name is reversed.	Match
PA	Wildcard match to name and full address.	Inquiry name matches name on FinCEN list partially using a wildcard search. Address matches FinCEN list exactly.	Match
PP	Wildcard match to name and partial address	Inquiry name matches name on FinCEN list partially using a wildcard search. Address matches partially.	Match
P	Wildcard match to name	Inquiry name matches name on FinCEN list partially using a wildcard search.	Match
SA	Match to similar name and full address	Inquiry name matches name on FinCEN list using a similarity search. Address matches exactly.	Match
SP	Match to similar name and partial address	Inquiry name matches name on FinCEN list using a similarity search. Address matches partially.	Match
S	Match to similar name	Inquiry name matches name on FinCEN list using a similarity search.	Match
IA	Match to first initial, surname, and full address	Inquiry first initial and surname matches name on FinCEN list. Surname and address matches exactly.	Match
IP	Match to first initial, surname, and full address	Inquiry first initial and surname matches name on FinCEN list. Surname and address matches exactly.	Match
I	Match to first initial and surname	Inquiry first initial surname matches name on FinCEN list. Surname matches exactly.	Match
N	No match to name or address	Inquiry name not on FinCEN list.	No match

Appendix E: AssureAMS Match Codes

AssureAMS Match Found Codes

Code	Definition	Explanation	Match Summary
M	Matches Found	Matching profiles were found for the entered data.	Match
N	No Matches Found	No matching profiles were found for the entered data.	No match

AssureAMS Type Categories

Code	Description
ABU	Abuse (Domestic, Elder, Child)
ARS	Arson
AST	Assault, Battery
BRB	Bribery, Graft, Kickbacks, Political Corruption
BUR	Burglary
BUS	Business Crimes (Antitrust, Bankruptcy, Price Fixing)
CFT	Counterfeiting, Forgery
CON	Conspiracy (No specific crime named)
CPR	Copyright Infringement (Intellectual Property, Electronic Piracy)
